

# More Milk

MTD/1™

ECOSYL™

For consistently better silage

In their review of published animal performance trials, Kung & Muck showed only three inoculants had sufficient trials to show improved milk yield and highlighted the large number of trials behind MTD/1 (ECOSYL) in particular. There are now 16 dairy trials for MTD/1 (ECOSYL) with the average milk increase being 2.5 lb/cow/day. 6 of those trials were conducted in the USA with the average increased of 3.1 lb/cow/day.

We are confident that ECOSYL still has **more** data showing **better** results than any other brand. Trust in ECOSYL to provide you the greatest return on your investment and maximize your forage program.
